

CHIVAS FARMING

WHITEPAPER

CHIVA TOKEN
TO THE MOUNTAIN HEIGHTS

INTRODUCTION

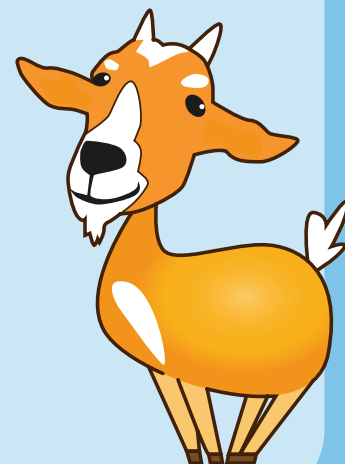

CHIVAS FARMING (CHIV) is a multiplayer tower defense game, where your chivas are also your true asset. The goal is to combine the phenomenal **CHIVAS** with the new blockchain technology: NFT.

Each Chiva is unique and accessible to everyone through the marketplace. Our chivas can be traded in our marketplace. In the free corrals you will be able to play and win real assets.

We will bridge the gap between normal games and blockchain games.

Mobile devices are our main goal. **CHIV** can be played anywhere, anytime, as long as it is connected to the network.

It is the combination between the love for this genre and the idea of real ownership over something that you will enjoy while generating income.

**CHIVA
TOKEN**

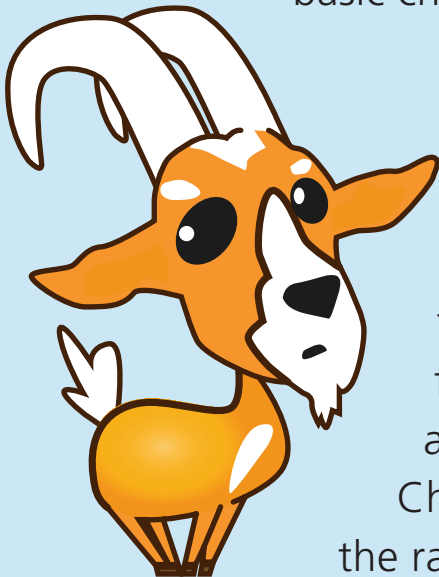

The game takes place in a world called **CHIVAS FARMING**, which was once a harmonious place. Unfortunately pollution and radiation caused many deaths and illnesses. But over time, a group of chivas became mutants, became special, and grew up unique. The new generation will inherit elements of nature and special traits. They will become fighters and soldiers, to protect their home, their corrals.

An NFT baby Chiva, can become any NFT Chiva, from the most common to the rarest.

Players will also be able to purchase private corrals in our marketplace, these corrals will have other benefits that the free corral does not have.

To play in the standard version: each player has 1 corral, 1 basic chiva and 5 baby chivas (these will not be NFT).

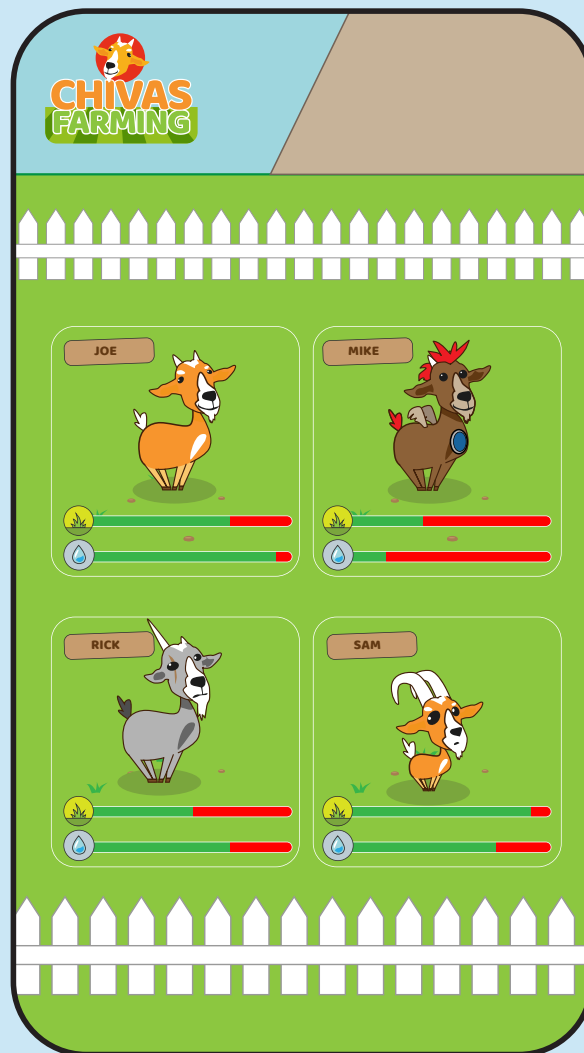

Investors who do not have the capability to acquire a Chiva NFT, will be able to enter the game with the basic investment, accumulate the farming token until reaching the necessary amount to be able to exchange it for a Chiva Baby NFT, which must drink water and be fed for 6 days to grow and become a Chiva NFT, this can be from the most common to the rarest.

GAME MODE VERSION

VERSIÓN (BETA)

BASIC GAMEPLAY

- In each round, players will be assigned a free corral, in which they can place 1 mother chiva and 5 baby chivas (BASIC)
- Players must acquire food and water to feed their herd. If at the end of UTC day, the herd was not fed, the player will lose 70% of the farming token.
- Players must be on the lookout for predators, to defend their herd, they must acquire the protective fences, which will have to be

reinforced daily, since the predators stop the production of the farming token.

- Players will also be able to complete daily missions, which consists of going to the private corrals to feed and give water to the Chivas NFT, they must do it 15 times a day and only once per Chiva NFT.

GAME MODE PHASE 2.0 PVP

For multiplayer (PVP), in addition to defending, players can use skills to gain advantages. The teams with higher skills in their **CHIVAS NFT**, will have more chances of winning the match.

The skills and experience of the chivas can be increased in level by completing daily tasks in the game.

For single player, we start with Endless Survival Mode (PVE). This mode is for users who want to earn additional rewards and increase the experience level of their chivas, daily tasks must be completed in that mode.

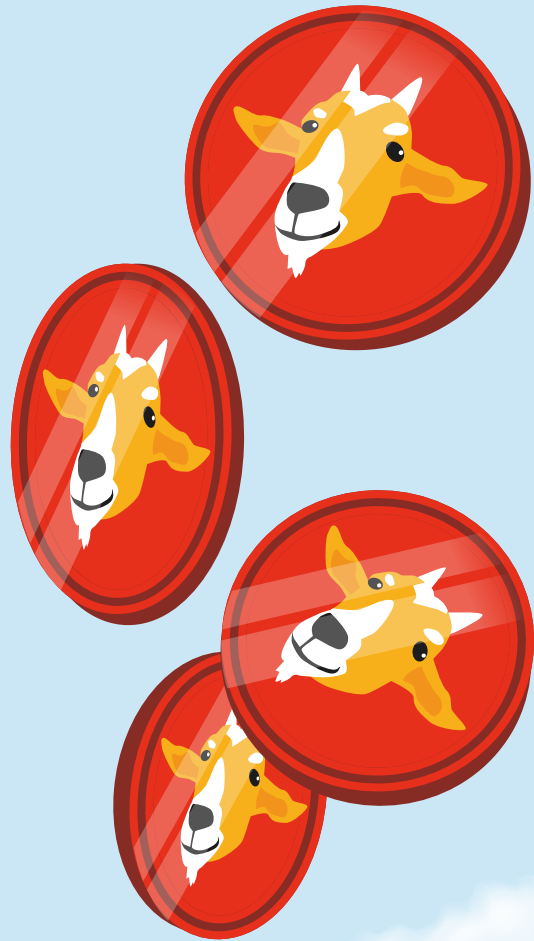

A GAME MADE FOR YOU

Everyone can play.

It is designed to entertain and generate profits to improve your economy. You will be able to collect and invest, as the value and uniqueness of each Chiva NFT is protected. Our community will have a voice and decide options, such as the Chivas Babies NFT bidding system, before applying it to the game.

In the case of underage players, they will need adult supervision.

COMMERCIALIZATION

- The market is now flooded with NFT games. **CHIVAS FARMING** offers a new concept in Blockchain games: **Tower Defense** and **Corral Simulation**.
- Most of the NFT games focus on the blockchain aspect and the games become an investment. This creates a huge barrier for free game players.
- The in-game currency is the central token of the ecosystem. Chivas NFT and Chivas Babies NFT can be purchased with the **CHIV** token in our Marketplace.
- Within the game, there will be a farming token (HR), which can be exchanged for CHIV whenever the player wishes.
- Everyone is available to gain rewards from playing.
- Improving the market: looking for a smooth transaction process and **avoiding high fees**.

- The community owns the game: The characteristics, the game modes and any changes to be made, will be notified so that the owners of the Chivas NFT can express their voice and vote before being approved.

BLOCKCHAIN FEATURES

MAIN CURRENCY, TOKEN CHIV
GAME CURRENCY (HR)

- The **CHIV** token is the native currency of the game and is also reflected as a BSC token. This allows token holders to play, invest, and also be part of the game. There is a total of **100 million CHIV**. Players enter with **CHIV**, which must then be exchanged within the game for HR, which will be the internal currency of farming. Internal operations such as purchase of Basic Chivas, implements such as food, water and protection, will be made

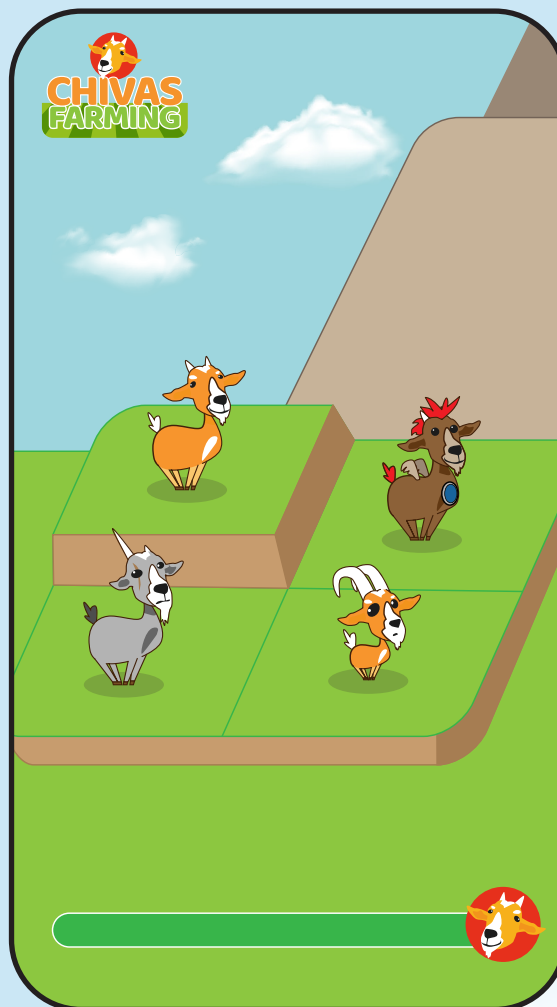

through HR. The player accumulates HR in each round and can convert it to **CHIV** or accumulate HR for the acquisition of Chivas Babies NFT.

GAME CURRENCY UTILITY

- **In-game currency:** HR will be used in the market to buy Baby Chivas, Chivas, water and other implements necessary for the game.

PlaytoGain: Everyone can participate in all game modes. Each mode gives CHIV as a reward differently:

- **Survival mode:** every time you feed and give water to your herd of chivas, you will receive bonuses in HR that you can later exchange for **CHIV**.

- **Multiplayer mode:** the 1 vs 1, 2 vs 2 game mode is being discussed. Players may be defending or attacking with chivas and / or predators at the same time. The winner of a game receives rewards in HR. This way, players placed on the leaderboard also get higher rewards per season.

BSC COMPATIBILITY

All Chivas Farming tokens and NFTs will be stored in an internal game database and in the BSC.

COLLECTABLES AND SCARCITIES

One of the most important elements of the NFT game is rarity. We want to keep this, but also have room for new updates / extensions in the future. For this:

- Each Chiva NFT has a stationary number of uses for the modes. When this number reaches 0, the Chiva cannot be used in that mode again.

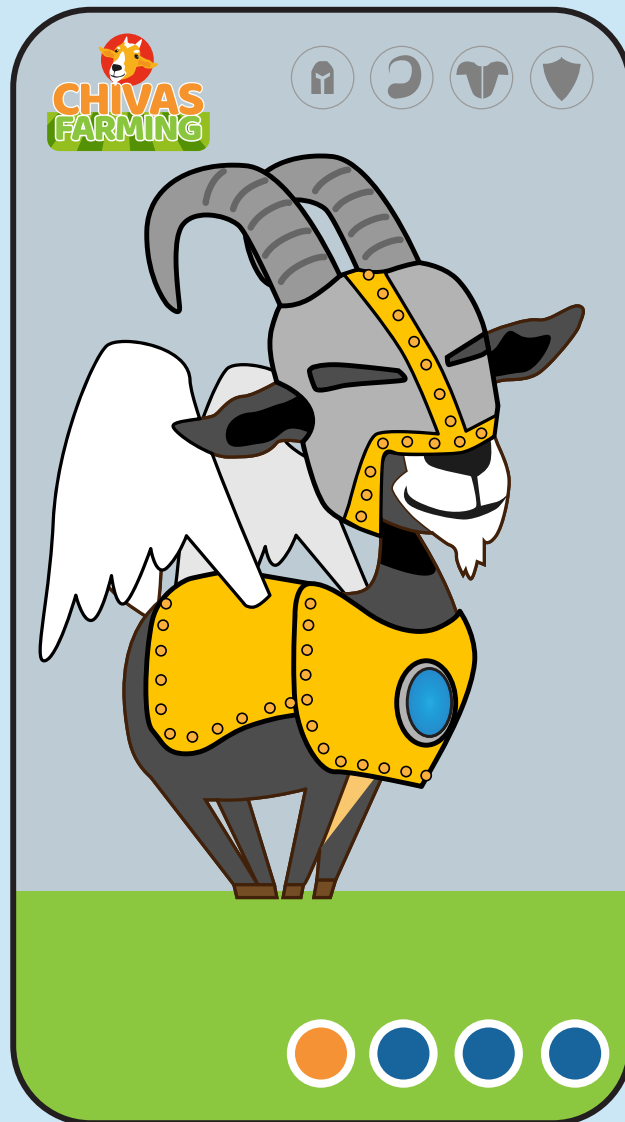

However, that Chiva can still be used in other modes or new modes in the future.

- With this mechanism, new chivas can be added to the corral. New unique Chivas can be found in each Baby Chiva sale period.

MARKET

Players can buy, sell, lend, or borrow their Chivas NFTs. All this happens in our internal system, to reduce the rate to only 3%

SALE AND ASSIGNMENT OF TOKENS

Token sale: CHIV tokens are offered in two phases, (PRE-SALE **40%** and PUBLIC SALE **20%**)

Ecosistema: PRODUCTION AND DEVELOPMENT NFT **30%**

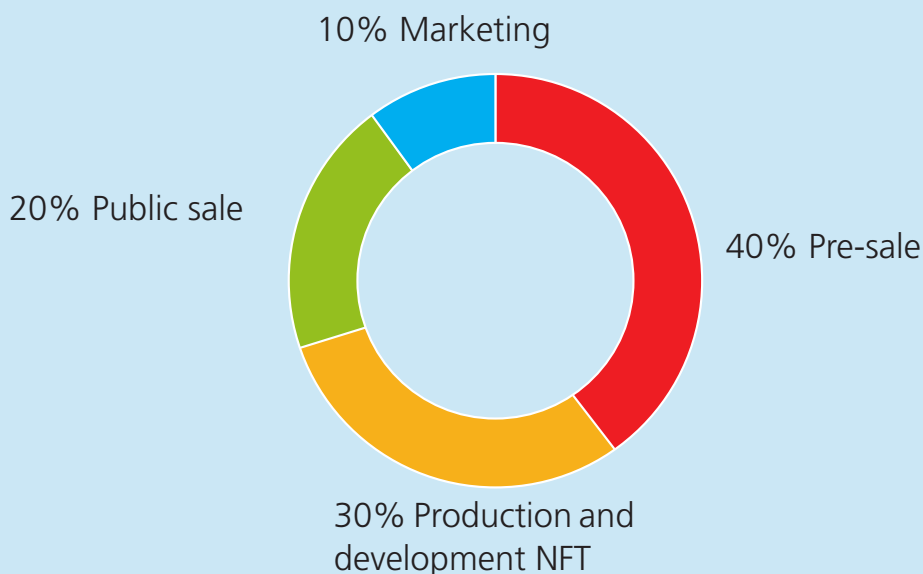

Marketing: **10%**

TOKENOMICS

Total supply: 100.000.000 CHIV

Contract: `0x9500e05ea02cc9cf3f904e83248b16e54e3e6e2e`

ROAD MAP

PHASE 1

- CHIVATOKEN Launch
- CHIVATOKEN Pre-sale
- 1,000 Members on social media
- List on ApeSwap and / or PancakeSwap, CoinMarketCap, CupCoin, Hotbit
- 200 Holders

PHASE 2

- Redesign and improvement of the website
- Chivas NFT Launch
- 5,000 Members on Telegram
- Visual Media Advertising in New York
- 10,000 Holders

PHASE 3

- Launch of **CHIVAS FARMING 2.0** PVP game
- Launch of all 3D models

PHASE 4

- Crossover with CHIVATOKEN's twin NFT for PVP games
- Launch of the CHIVATOKEN blockchain ecosystem
- Smart contract integration settings
